SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING) Department of Computer Science and Engineering

ASSESSMENT TOOL 2 – EXPERIMENTATION

Course Code:	ITA03	**Course Title:**	Mobile computing
CO Assessed:	CO2	**Assessment:**	Assessment Tool 2 – EXPERIMENTATION
Weightage:	30 % of CIA	**Total Marks:**	100 marks
CO2 Statement:	*Compare mobile communication technologies, including multiple access techniques and network evolution, based on performance and applications.*		
Student Name:	**K.Balaji**	**Reg. No.:**	**192324180**
Section / Batch:	**2023**	**Date:**	**24/10/2026**

Code of Conduct

*I **K.BALAJI/192324180** (Name / Reg. No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.*

Signature of the Student:K.Balaji

Instructions

- This test contains FIVE questions.
- Duration: 60 minutes (homework)

Annexure A - QUESTIONS

1. Figma-Based Mobile IP Communication Workflow Analysis (BL4 – Analyze) Design an interactive Figma prototype illustrating the complete workflow of Mobile IP communication when a Mobile Node moves from its Home Network to a Foreign Network. Your design should include the Home Agent (HA), Foreign Agent (FA), Correspondent Node (CN), Care-of Address (CoA), Registration Process, and Packet Tunneling.

Analyze the communication process by identifying:

- The purpose of each network component.
- Points where packet delay or packet loss may occur.
- The effect of node mobility on communication performance.
- Possible improvements to reduce latency.

Deliverables:

- Figma (.fig) design
- GitHub repository containing exported images/PDF and documentation (README).

2. Comparative Network Architecture Design Using Figma (BL4 – Analyze)

Using Figma or draw.io, create a comparative architectural diagram showing both a Cellular Wireless Network and a Mobile Ad Hoc Network (MANET) operating in the same smart city environment.

Analyze the architectures by comparing:

- Infrastructure dependency.
- Routing mechanisms.
- Scalability.
- Fault tolerance.
- Mobility support.
- Suitable application scenarios.

Highlight the advantages and limitations of each architecture through annotations in your design.

Deliverables:

- Editable design file.
- GitHub repository with screenshots, comparison report, and design assets.

3. Routing Protocol Visualization and Analysis (BL4 – Analyze)

Develop an interactive visualization using Figma, Mermaid.js, D3.js, or any visualization framework illustrating the operation of one Proactive Routing Protocol and one Reactive Routing Protocol in a mobile wireless network.

Analyze:

- Route discovery process.
- Route maintenance mechanism.
- Routing overhead.
- Delay in establishing communication.
- Performance under high node mobility.

Include a comparative summary explaining which protocol performs better under different mobility conditions.

Deliverables:

- Source code/design files.
- GitHub repository with implementation, screenshots, and analysis report.

4. Mobile IP Application Design for Smart Healthcare (BL4 – Analyze)
Design a Smart Healthcare Mobile IP system using Figma that enables doctors, ambulances, hospitals, and patients to remain connected while moving across different wireless networks. Analyze:

- How Mobile IP maintains uninterrupted communication.
- Challenges during handoff between networks.
- Security vulnerabilities during mobility.
- Possible design improvements to increase reliability.

Provide navigation between screens demonstrating different mobility scenarios.
Deliverables:

- Interactive prototype.
- GitHub repository containing design files, exported prototype, and documentation. 5. Wireless Network Decision Dashboard Using GitHub Project (BL4 – Analyze) Create a web-based dashboard (using HTML/CSS/JavaScript, React, or another programming framework) or an interactive Figma dashboard that helps network engineers determine whether a given scenario should use Mobile IP, Cellular Networks, or Ad Hoc Networks.

The dashboard should analyze multiple parameters such as:

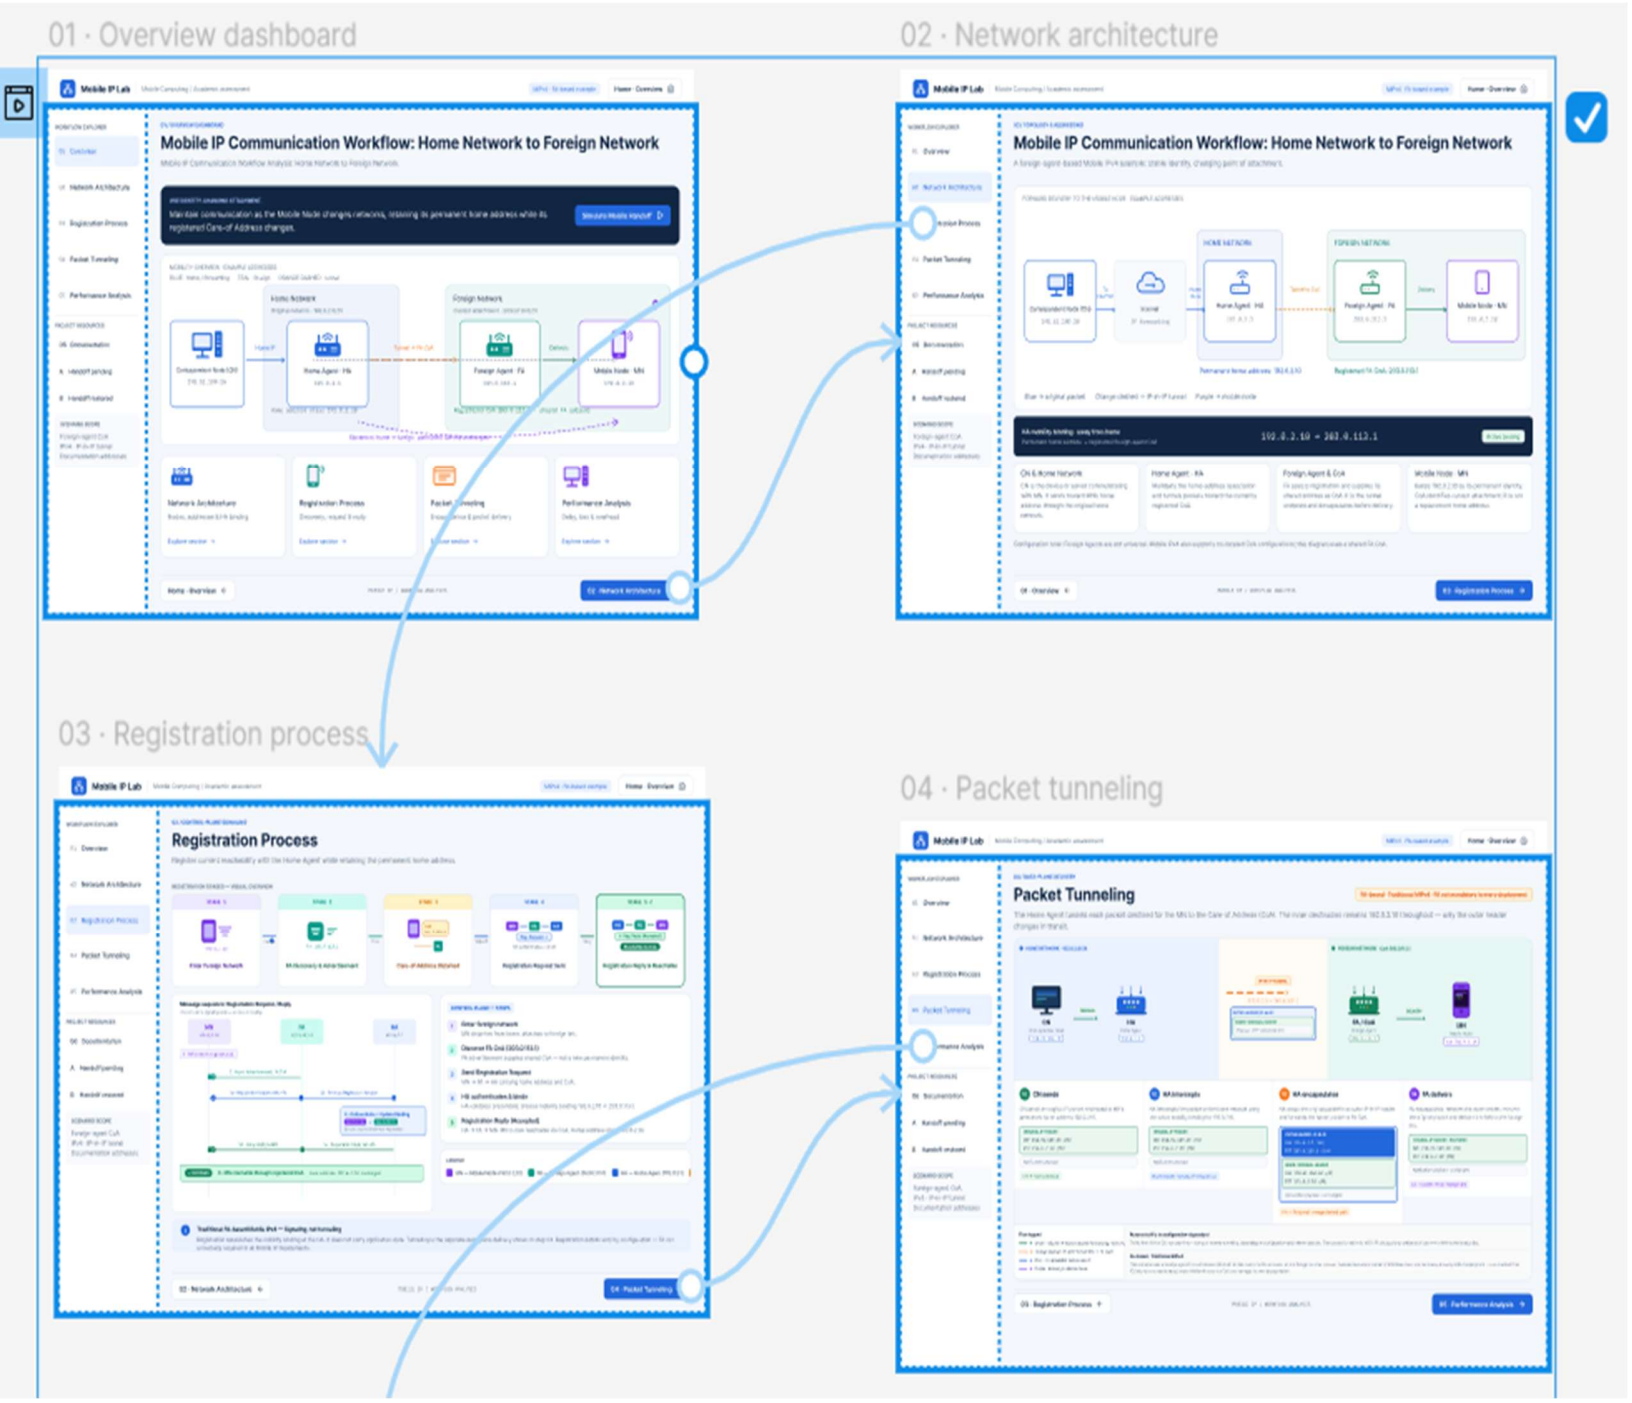

- Node mobility.
- Infrastructure availability.
- Network size.
- Routing complexity.
- Energy consumption.
- Reliability requirements.

The system should justify its recommendation based on the analyzed parameters.
Deliverables:

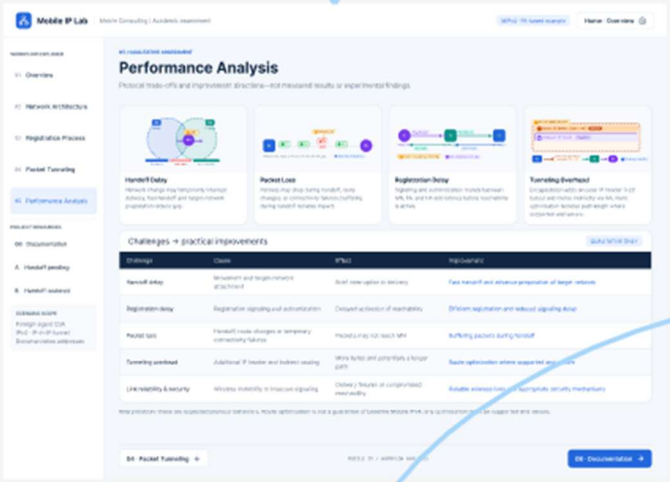

- Source code or Figma project.
- GitHub repository with complete code/design, README, screenshots, and analysis report.

Criterion	Marks
Design Quality (Figma/Programming Tool)	20
Technical Analysis	30
Correctness of Mobile Networking Concepts	20
GitHub Repository Organization & Documentation	15
Creativity and Visualization	15
Total	**100 Marks**

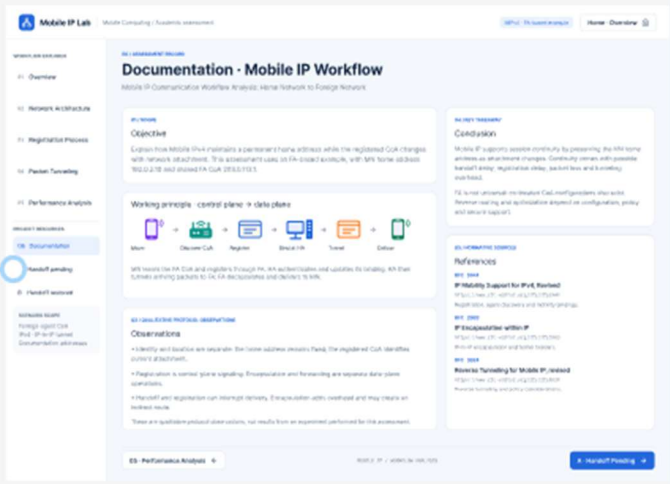

1)

01 · Overview dashboard
Mobile IP Communication Workflow: Home Network to Foreign Network
02 · Network architecture
Mobile IP Communication Workflow: Home Network to Foreign Network
03 · Registration process
Registration Process
04 · Packet tunneling
Packet Tunneling

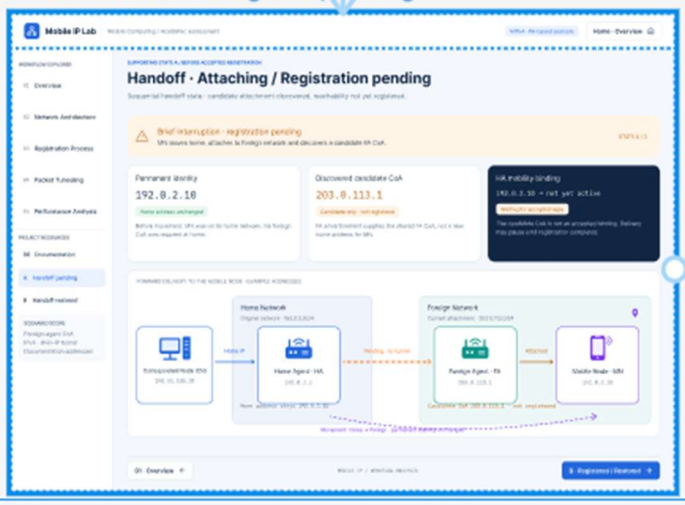

05 · Performance analysis

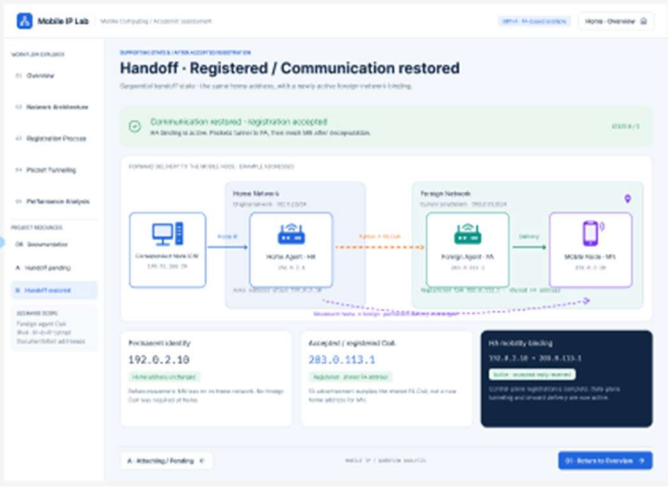

06 · Project documentation

A · Handoff attaching and pending

B · Handoff registered and restored

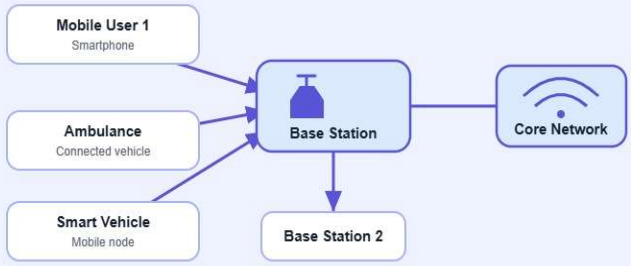

2)

SMART CITY NETWORKS

Cellular Network vs MANET

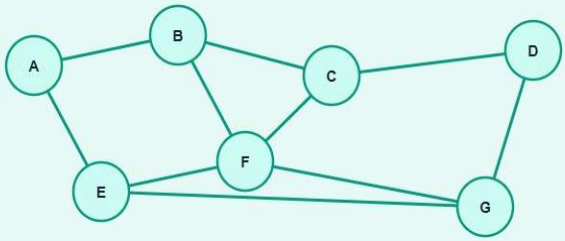

Comparing Network Architecture • Mobile Computing • ICT

01 / CELLULAR NETWORK

FIXED INFRASTRUCTURE • BASE STATIONS • HANDOVER

02 / MANET

DECENTRALIZED • PEER-TO-PEER LINKS • MULTI-HOP ROUTING

03 / QUICK COMPARISON

CRITERION	CELLULAR NETWORK	MANET
Infrastructure	Requires base stations and core network	No fixed infrastructure required
Routing	Network-managed connectivity	Nodes forward packets cooperatively
Scalability	Large coverage with planned deployment	Depends on density and routing overhead
Fault tolerance	Cell failure may disrupt local coverage	Alternate paths may help if connected
Mobility	Handover between cells	Routes adapt as nodes move
Applications	Broadband, smart vehicles, public mobile service	Disaster response, field and temporary networks

CELLULAR / PROS & CONS

+ Managed connectivity, broad coverage where deployed, high capacity
− Infrastructure cost; coverage depends on deployed cells

Use for: broadband, public mobile communication, connected vehicles

MANET / PROS & CONS

+ Rapid deployment, flexible formation, no fixed base station
− Routes change; range, battery, and routing overhead matter

Use for: disaster recovery, field operations, temporary networks
